BOBAI Lite Paper

Brain On BNB AI — Where Memes Meet Intelligence • Version 1.0 • April 2026

1. Introduction

Brain On BNB AI (**$BOBAI**) is a deflationary meme token on BNB Smart Chain, built entirely by AI. The project explores what happens when artificial intelligence handles every aspect of a token — from smart contract deployment to an autonomous buyback & burn mechanism that runs 24/7 without human intervention.

BOBAI was fair-launched on Four.Meme on March 27, 2026 with no presale, no team allocation, and no vesting. 100% of the token supply went to the open market.

2. Tokenomics

PARAMETER	VALUE
Token Name (Contract)	BOB
Token Name (Branding)	Brain On BNB AI
Symbol	BOBAI
Chain	BNB Smart Chain (BEP-20)
Total Supply	1,000,000,000
Decimals	18
Launch	100% Fair Launch via Four.Meme
Presale / Team / Vesting	None
Liquidity	Locked (PancakeSwap V2)
Ownership	Renounced

On-Chain Tax: 3%

Every buy and sell transaction incurs a **3% tax**, split three ways:

- **1% Creator** — sent to the creator wallet, used to fund the autonomous buyback bot operations
- **1% Burn (BOB)** — used to buy and burn BOB (Build on BNB), sent to the dead address
- **1% Burn (BOBAI)** — used to buy and burn BOBAI, sent to the dead address

The result: **2% of every trade is permanently burned**, continuously reducing the circulating supply. The tax is hardcoded in the smart contract and cannot be changed after deployment.

3. Buyback & Burn Mechanism

The core of BOBAI is its autonomous buyback & burn bot. This bot runs as a Cloudflare Worker on a cron schedule, executing every 10 minutes.

How It Works

1. The 3% tax accumulates in the token contract
2. When the threshold is reached, the bot triggers a dispatch
3. The buyback portion is swapped for BOBAI via PancakeSwap
4. Purchased tokens are sent to the `0x000...dEaD` burn address
5. Each burn is a verifiable on-chain transaction

The result: **supply decreases over time**. Every trade contributes to reducing the circulating supply permanently.

Bot Infrastructure

The buyback bot runs on Cloudflare Workers with a cron trigger — no server to maintain, no downtime. The bot's source code is fully open source.

Serverless 24/7 Open Source Autonomous

4. Security

- **Contract Verified** — source code verified on BscScan
- **Owner Renounced** — no admin functions, no minting, no pausing

- **LP Locked** — liquidity locked on PancakeSwap
- **No Proxy** — contract is not upgradeable
- **Open Source** — all bot code is public on GitHub
- **Tax Immutable** — 3% rate is hardcoded, cannot be modified

5. Built by AI

Every component of BOBAI was created with the assistance of AI:

- Token deployment and configuration
- Buyback & burn bot logic
- Dashboard and website
- Telegram community bot
- Marketing copy and branding

BOBAI is an experiment in AI-driven token creation and management — exploring how far autonomous systems can go in the crypto space.

6. Contract Details

Contract	`0x245c386dcfed896f5c346107596141e5edcbffff`
Pair (BOBAI/WBNB)	`0x6eadd4cb786898b34929444988380ed0cc6fd9a6`
DEX	PancakeSwap V2
Compiler	Solidity 0.8.20

8. Disclaimer

BOBAI is a meme token and an experimental project. It is not financial advice and should not be treated as an investment. Cryptocurrency is volatile and you may lose your entire investment. Do your own research before interacting with any token or smart contract. There is no team, no roadmap promises, and no guaranteed returns.
